

Atnotarize is the first blockchain based platform for remote online notarizations.

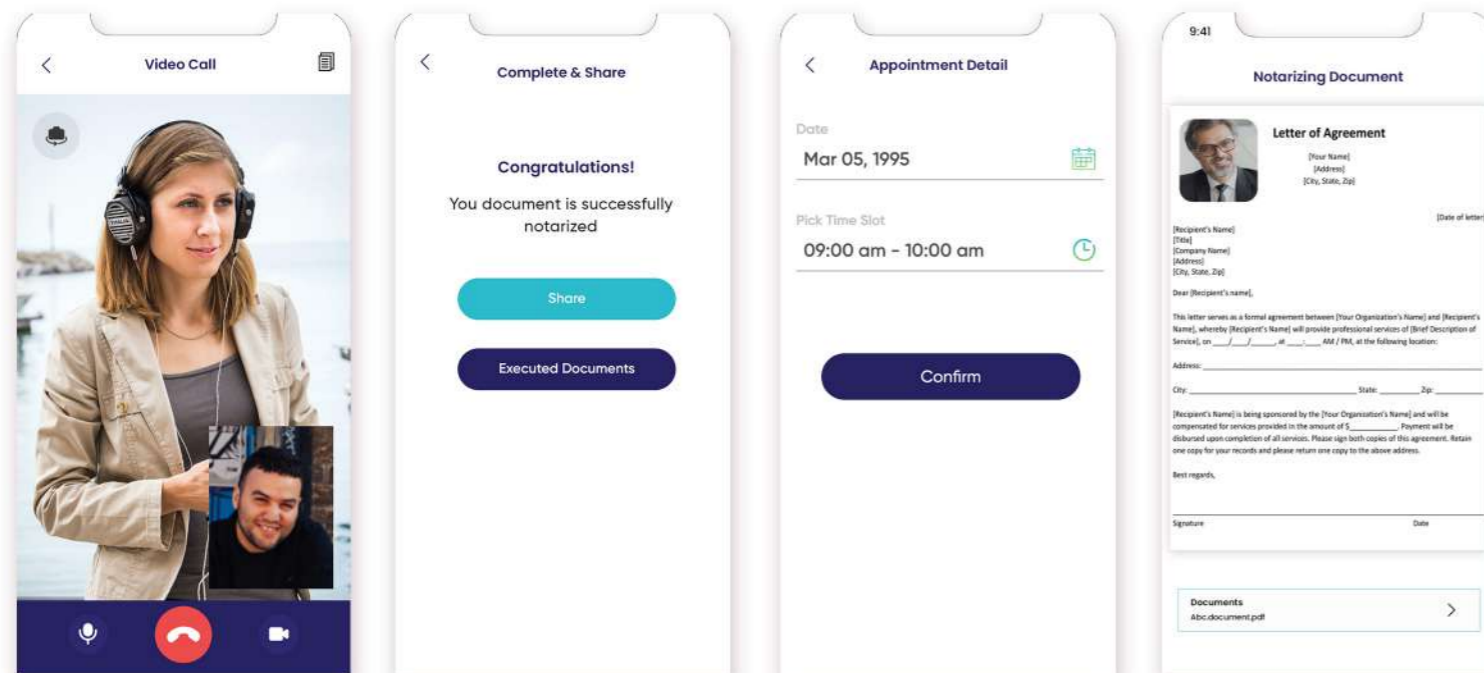

Data is secure and immutable on a Hyperledger blockchain and is protected on the Oracle cloud.

Atnotarize is simple and easy to use for both customers and notaries. Whether you are a small notary, a large notary house, a law firm, a title company or a financial institution we have solutions for you.

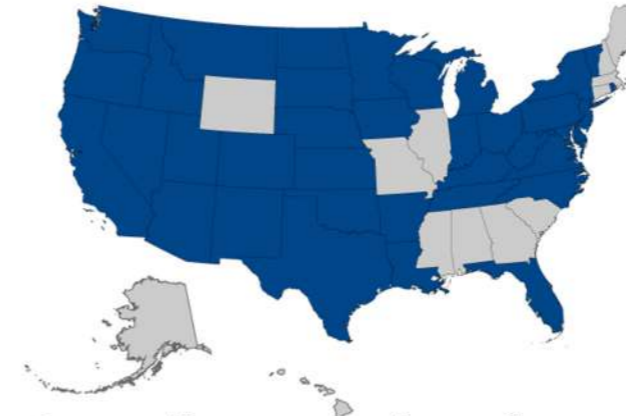

## About Us

Atnotarize is a product of AtCash Inc., a global technology provider that specializes in remote trust solutions. We have specific technologies focused on identity, video verification, contracts and blockchain that solve a number of use cases. Atnotarize is our solution for remote online notarizations and other forms of electronic notarizations.

## Secure. Easy. Convenient

## Compliant with State Regulations

We specialize in remote online notarizations (RON) and e-notarizations. We are building capabilities for all other hybrid forms of electronic notarizations. We comply with several state requirements for remote online notarizations (RON) and add new states regularly. Regulations change regularly and the landscape is ever shifting.

- States allowing some form of e-notarization

## Unique Business Model

Our model is unique in the industry because it allows you to grow your own business while also benefiting from a marketplace model. Simply embed a link on your own website to do electronic notarizations directly with your customers. You can choose between live notarizations and appointments. You can also decide whether you want us to send you customers through our marketplace.

## Affordable and Attractive

- **70%** to the notary - No hidden fees and the majority of the revenues go to the notary.
- **\$19.99** - Low monthly fees per notary
- **\$100** - Setup per notary
- **Custom** - Enterprise pricing

For larger and more custom implementations, you can license our solutions, white label them, or consume our API's. At the heart of our application is a process-based implementation. This allows us to solve for several use cases quickly.
